free and pursuing peace," and with its 12 faculties and 4 graduate schools, it has achieved significant development as one of the most distinguished research universities in Japan under the following five guiding principles: "the pursuit of peace," "the creation of new forms of knowledge," "the nurturing of well-rounded human beings," "collaboration with the local, regional and international community" and "continuous self-development."

Hiroshima University has been selected as one of the 13 Type A (top type) universities under the fiscal 2014 program to support the creation of super global universities. It is the only university in the Chugoku/Shikoku region to be selected as such. Hiroshima University aims to become one of the global top 100 universities within the next 10 years by continuously producing global talents and creating knowledge while promoting university reforms centering on the twin pillars of educational and research capabilities.

Features of the University

Hiroshima University has maintained the founding principle of "a single unified university,

Features of the Graduate School

In the education and research area of humanities and social sciences which is socially required to

be re-considered, it is required not only to promote knowledge of exploration studies that have been traditionally conducted in various fields but also to create new social values and methods for solving problems in a rapidly-changing society. To address such a requirement, this graduate school integrates faculties who are engaged in education and research in various graduate schools into one graduate school to establish an education and research organization in which the wall between fields is eliminated. This organization aims to develop human resources who are capable of sharing values with specialists of other fields and being engaged in cooperation for realizing such values by cultivating interest for other fields than their specialties in addition to the existing academic field. To conduct the education and research to achieve the aim described above, this graduate school introduces the degree program system that specifically indicates the image of human resources to be developed, diploma policy, and curriculum policy for the students who want to earn a degree and clearly describes the purpose and method of cooperation with the education course within and outside of the major course. It is expected that students will be allowed to expand their vision and develop their will and capability for communicating with each other beyond the differences in their specialty fields and nationality while studying in the same place as students of various fields that are not limited within the framework of the existing graduate school, students of various degree programs with different characteristics, and foreign and Japanese students who are engaged different issues and have different cultural and religious backgrounds. In response to the introduction of the degree program system, the name of the degree program is indicated in the diploma certification in addition to the major course name and the name of the specialty field to allow students to easily explain their specialties.

Features of the Programme

The International Economic Development Program fosters advanced professionals and researchers who can contribute creatively and collaboratively to development policy planning, implementations, evaluations and improvements towards promotion of sustainable development goals, through acquisition of global perspectives, and knowledge and skills necessary in evidence-based interdisciplinary social science.

The art and science of policy making is entering into a new era. The paradigm shift is upgrading

the process of policy making and its impact evaluation from a personal-experience-based subjective approach to a more objective, evidence-based one. Evidence-based decision making does not merely mean the utilization of data; rather, it explicitly prohibits doing so, by acknowledging the wisdom that what our data shows in front of our eyes is just the correlation, and not the causation that we need to base our decision.

The fact that "people with higher education enjoy higher income" does not imply "promoting higher education promotes income growth." The fact that "countries with higher child birth rates face higher poverty" does not imply "suppressing child birth reduces poverty."

The fact that "cities with better sewage have better child health" does not imply "better sewage improves child health."

If we want to know the impact of the policy to tackle these problems, we must find the truth hidden behind the observed data.

The art of science of finding the truth in this way is the evidence-based decision making that we offer.

Curriculum

The International Economic Development Program provides the systematic curriculum to cultivate abilities for identifying/targeting issues, applied analysis, policy proposals that can link advanced social science methods to practical problem solving. Additionally, this program offers learning and training opportunities to develop professional communication skills to work with diverse stakeholders and leadership in problem solving.
